PitchSuite AI

PitchSuite | CBRE Executive Briefing

Less Searching, More Closing

The smarter way to find, manage, and publish pitch materials

PitchSuite AI

The Gaps Your Team Lives With Every Day

Legacy Pain Points

- No personal filter in the approval queue
- Approve and Reject buried below 30 fields
- No notification when a submission is rejected
- Search only shows a fraction of available slides
- No visual status for rejected items
- Win and loss data is months out of date
- Reporting is entirely manual

How PitchSuite Fixes them

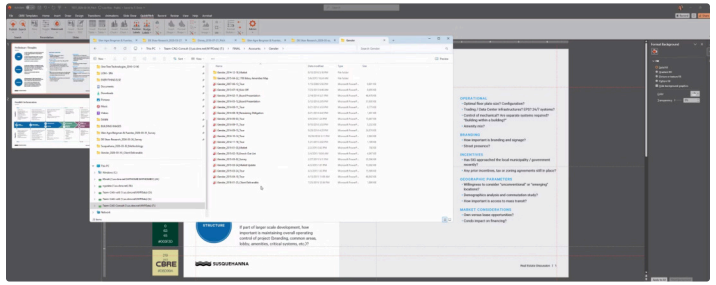
- Personal queue with actions always visible
- Smarter detail panel that shows what matters first
- Instant rejection alerts with feedback on next steps
- Smart Search that finds everything your need
- Streamlined Autotagging/Publishing workflows
- Capture wins and losses as they happen
- Live Metrics dashboard showing (KPIs, Deal Activity, Audit trails, and more)

PitchSuite[AI]

Stop Building From Scratch. Start Winning Faster.

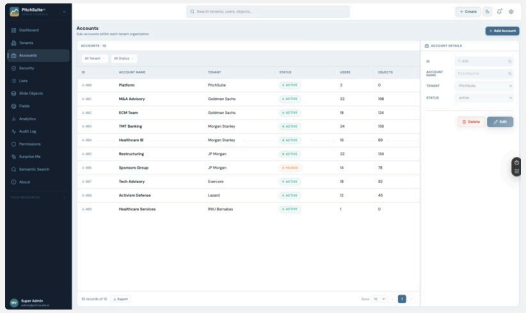
Current

- Files live on a shared drive with consistent naming — but someone still has to check everything manually
- Current system surfaces a fraction of what's actually out there (10k of 66k objects)
- No way to tell if a slide was still current without opening it
- Manual checking and verification falls on the team every time



Next Generation

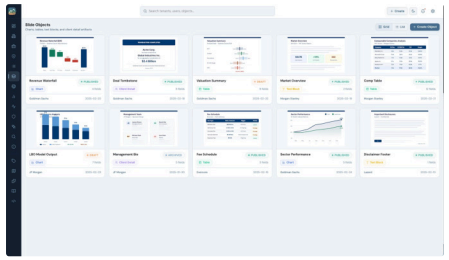
- Smart Search — *"show healthcare M&A tombstones last 7 days"*
- The entire library is indexed and searchable — all 66,000 slides, not just the first 10,000
- Slides are automatically tagged and ready to find the moment they're published
- Stale content is flagged before it ever reaches a client



> *This isn't a new folder system. It's AI working quietly in the background — so your team doesn't have to.*

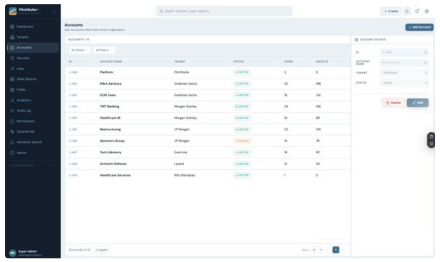
PitchSuite[AI]

The Deal Intelligence Layer Your Library Was Missing.



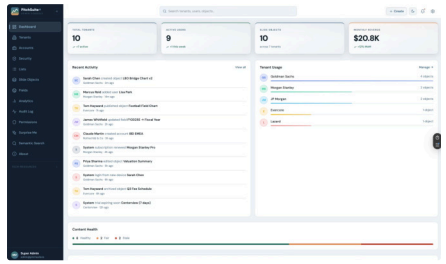
Your Content, Always Current

- Every slide in the library is findable — not just the ones the search happens to surface
- Slides untouched for six months are flagged automatically
- Publishers can update and replace content without disrupting what consultants already use
- The whole team works from the same library — no more parallel versions on personal drives
- Clear, clean icons to show what's Approved, Pending or Rejected in publishing workflow



Less Admin, More Pitching

- Every slide is automatically tagged the moment it's published — no manual classification
- Review and confirm suggestions in one click
- Duplicates are caught before they clutter the library
- Consultants spend their time on pitches, not fixing decks
- A clean, modern interface makes it easy to navigate — no training required



Key Insights at a Glance

- See which slides appeared most in the deals you won
- Understand what content performs across sectors and deal sizes
- Track every pitch from first publish to final outcome — win or loss
- Give leadership a live view of team activity, pipeline, and results
- No more quarterly, manual spreadsheets — the numbers are always up to date
